### **ASTM E2149 - 13a Standard Test Method for Determining the**

Methods for Assessing Antimicrobial Performance ASTM E2149-01 "Dynamic Shake Flask" Method for Determining the Antimicrobial Activity of Immobilized Antimicrobial Agents Under Dynamics Contact Conditions

### **PowerPoint Presentation**

3.1. ASTM E2149 Test for Irregularly Shaped Antimicrobial Surfaces This is a microbiological quantitative and standardized method and representing a bacterial test. It is destined for the analysis of irregularly shaped surfaces of the materials and it is frequently used in the antimicrobial materials industry, although it presents some disadvantages. The principle of this method consists of ...

### **METHOD FOR TESTING THE ANTIMICROBIAL CHARACTER OF THE**

The ASTM E2149 method, titled "Determining the Antimicrobial Activity of Immobilized Antimicrobial Agents Under Dynamic Contact Conditions" is a sensitive test, often used to measure the antimicrobial activity of non-leaching, irregularly shaped or hydrophobic surfaces.

### **ASTM E2149 | Microchem Laboratory**

1.1 This test method is designed to evaluate the resistance of non-leaching antimicrobial treated specimens to the growth of microbes under dynamic contact conditions. This dynamic shake flask test was developed for routine quality control and screening tests in order to overcome difficulties in

### **ASTM E2149 - 10 Standard Test Method for Determining the**

In this study, ASTM E2149:2013 standard was used to test the antimicrobial effects on dyed wool fabric. By this method, the samples were placed in a laboratory flask containing a dilute suspension of Escherichia coli.

### **Investigation of the Color, Fastness and Antimicrobial**

Test Methods conform to ASTM E2149-01 guidelines (Standard Test Method for Determining the Antimicrobial Activity of Immobilized Antimicrobial Agents Under Dynamic Contact Conditions). Specific details of testing and materials is listed below the table.

### **General Instructions For The Guidance Of Post Office**

Two industry methods (modified ISO 22196 and ASTM E2149), a "dried droplet", and a "transfer" method were tested against two commercially available antimicrobial films, one film in development, an untreated control, and a positive (silver) control film. At 2 (only ISO) and 24 hours following inoculation, bacteria were collected from film surfaces and enumerated.
