Osmosis Osmosis is a special example of diffusion. It is the diffusion of water through a partially permeable membrane from a more dilute solution to a more concentrated solution " down the

### **Diffusion, Osmosis, Active Transport - BiologyMad**

Osmosis and diffusion are the two different types of passive transport which play an important role in moving molecules in and out of the cell. Osmosis The process of moving of solvent particles across a semipermeable membrane from a dilute solution into a concentrated solution to equalize concentration.

Diffusion and Osmosis The cell membrane plays the dual roles of protecting the living cell by acting as a barrier to the outside world, yet at the same time it must allow the passage of food and waste products into and out of the cell for metabolism to proceed.
